The bifacial dual sided glass module (G2G) generates more electricity by converting direct, radiant and scattered solar energy on both the front and the back side of the module.

Significant amount of near infrared light passes through bifacial cells. Double-glass structure shows a loss of ~ 1.30% compare to the glass/backsheet structure under STC measurements.

Durasol Poly Crystalline Solar Modules offer high-efficiency power generation, durable construction, and superior weather resistance. Ideal for residential, commercial, and industrial solar applications.

Multi-crystal silicon wafers are made up of multiple crystals of silicon which have different sizes and shapes. These multiple-crystalline-silicon (MCS) materials provide increased stability and lower ...

The company has a group of experts who are able to provide crystalline silicon and thin- film photovoltaic products and systematic equipment. Macrolink Intelligent Photovoltaic is indeed a world ...

In this paper a glass-glass module technology that uses liquid silicone encapsulation is described.

Frameless, reduce possibility of PID occurrence & power degradation Lower annual power degradation & more solar power generation Double glass design, better protection for solar cell & reduce cell ...

mc-Si cells refer to multi-crystalline silicon photovoltaic cells made from square silicon substrates cut from polycrystalline ingots grown in quartz crucibles, characterized by lower production costs ...

Targray's portfolio of high-efficiency multicrystalline solar modules is built to provide EPCs, installers, contractors and solar PV developers with reliable, cost-effective material options for their commercial ...

Encapsulant material Back Glass POE/EVA 2.0 mm (0.08 inches), Heat Strengthened Glass (White Grid

2 square double glass multi-crystalline silicon module

Glass) Connector

The company has a group of experts who are able to provide crystalline ...
