The purpose of this study is to investigate the potential use of solar energy within an oil refinery to reduce its fossil fuel consumption and greenhouse gas emissions.

Herein, a solar multi-energies-driven hybrid chemical oil refining system, exemplified by residual oil cracking, has been successfully developed and formulated in solar-driven thermo ...

On an industrial scale, one can visualize a solar refinery (see Figure 1) that converts readily available sources of carbon and hydrogen, in the form of CO and water, to useful 2 fuels, such as methanol, ...

The proposed system partially supplements its crude oil heating and electric power requirements with solar energy. Thermal energy storage (TES) tank is employed to ensure un ...

Greek energy group Helleniq Energy, former Hellenic Petroleum, intends to equip its Thessaloniki refinery with solar panels and battery storage units and might also produce green ...

Greece's strategic location and renewable energy ambitions have positioned it as a hub for innovative container energy storage systems. These modular units are reshaping how industries store and ...

Helleniq Energy plans to construct a large-scale solar power plant in order to fully cover the electricity needs of its refinery in Thessaloniki. The solar power plant should be built in ...

The solar energy farm is planned to be located in Thessaloniki's wider area, facilitating its link with the refinery. Helleniq Energy also intends to install standalone batteries for energy storage ...

The present study investigates the feasibility of solar hybrid system to generate steam in the oil refinery to maintain the temperature of heavy crude oil products before despatching from ...
