What are the different types of air cargo containers?

Because of the variety of cargo transported via passenger airlines, cargo-only plants, and supercargo plants, different types of air cargo containers are required. Some of the options in air cargo container types include; Unit Load Devices or ULDs, pallets, and specialty containers. Air cargo container sizes vary depending on what's being hauled.

What are Delta cargo shipping containers?

Delta Cargo offers shipping containers that are specially designed to help control the costs of packaging and transportation for you and to improve security for all of us. Read more below to learn which containers are compatible with our aircraft, the size of our cargo bins, and the types and sizes of our available containers.

What are air freight containers?

Air freight containers are essential components of modern air cargo logistics. Each year, millions of tons of goods move across global air networks packed into standardized air freight containers. Also known as Unit Load Devices (ULDs), these containers enable efficient, secure, and cost-effective transport of cargo in aircraft holds.

Why do airlines use air cargo containers?

This allows airlines to operate seamlessly with cargo agents, freight forwarders, ground service crews, and all other stakeholders. Air cargo containers are loaded and unloaded in various ways. Loading the cargo onto an aircraft is a specialist aspect of logistics.

All containers are equipped with various lashing devices on longitudinal rails and corner posts. The High Cube container is specially designed for voluminous cargo.

ULDs are specialized containers used to transport cargo securely. Each aircraft type requires specific ULDs designed to fit the dimensions and contours of its cargo hold. Explore all available ULD options ...
