Read the latest research on everything from new longer life batteries and batteries with viruses to a nano-size battery.

The BDC leads the advancement and commercialization of cutting-edge energy storage technologies through collaborative research, rapid prototyping, and comprehensive testing services, fostering ...

New research finds liquid air energy storage could be the lowest-cost option for ensuring a continuous power supply on a future grid dominated by carbon-free but intermittent sources of ...

These advanced analyses help researchers push the boundaries of battery performance. Select from lithium ion / sodium ion batteries or fuel cells and click the numbers on the infographics to see ...

Next-generation battery management systems maintain optimal operating conditions with 45% less energy consumption, extending battery lifespan to 20+ years. Standardized plug-and-play designs ...

The NOVONIX team provides battery process development, custom cell prototyping and performance testing, as well as post-mortem and material analysis to help you develop longer-lasting, high ...

This makes research into and development of more efficient and inexpensive redox flow batteries critical to grid modernization. PNNL's redox flow battery laboratories offer several stations ranging from ...

The project comprises of the following four components: (i) Sub-transmission and distribution network reconstruction, reinforcement, and operations efficiency in the major load centers of Hargeisa; (ii) ...

Investing in research and development for better energy storage technologies is essential to reduce our reliance on fossil fuels, reduce emissions, and create a more resilient energy system.

Xcel Energy is conducting the Wind-to-Battery (W2B) Project to evaluate the overall effectiveness of sodium

Battery research and development palikir

sulfur (NaS) battery technology in regards to its ability to facilitate the integration of wind ...
