OverviewHistoryPhotovoltaicsSolar thermal powerGenerationGovernment supportState challenges with solar powerPublic opinionSolar power has been growing rapidly in the U.S. state of California because of high insolation, community support, declining solar costs, and a renewable portfolio standard which requires that 60% of California's electricity come from renewable resources by 2030, with 100% by 2045. Much of this is expected to come from solar power via photovoltaic facilities or concentrated solar power facilities.

The state of California was one of the pioneers in creating policies for the development of distributed solar generation. Not by chance, the Californian model served as a reference for the ...

California has the largest solar market in the U.S. and has been a longtime champion of solar because of the many economic and environmental benefits it provides, including billions in local investment.

On this page, you can explore our database of solar projects in California. Each month, we track projects in development and update our list of the largest solar projects expected to come online in California.

With 5.400 photovoltaic panels, HCB hopes to achieve 85% energy autonomy and savings of approximately R \$ 213 thousand per month. The project began in March this year, but will ...

"What started as a small talk with a stranger on the sidewalk in San Francisco with a very positive and nice person, developed to a walkthrough the facility and full conversation about solar installations ...

The California Solar & Storage Association (CALSSA) is the state's largest clean energy business group with over 700 member companies representing an array of businesses that manufacture, design, ...

California is an incredibly influential test case for clean energy, as shown by Gov. Newsom's high-profile trip to Brazil.

In California, the Solar Canal Initiative (CSCI) is moving forward with its innovative plan to install solar

California solar energy brasilia

panels over the state's 4,000 miles of canals. Early research shows this could...

Much of this is expected to come from solar power via photovoltaic facilities or concentrated solar power facilities. At the end of 2023, California had a total of 46,874 MW of solar capacity installed, enough ...

SOLV Energy delivers the large-scale solar and battery storage projects that keep these industries powered -- on time and at massive scale. With proven expertise, deep resources and full lifecycle ...
