Construction professionals face mounting pressure to integrate sophisticated energy storage systems while balancing cost constraints, spatial limitations, and evolving regulatory ...

October 13 - U.S. energy storage installations are set to hit record highs this year but lower deployment rates are expected from 2026 as developers adapt to a suite of new policies from the...

Under a continuity safe harbor endorsed by the IRS, projects that begin construction in 2025 would have until the end of 2029 to be placed in service. Under the physical work test, a ...

Facilities that begin construction in 2034 will be eligible for 75% of the full credit amount, dropping to 50% for construction beginning in 2035, and phasing out entirely for projects beginning in ...

The first step for any power or storage project is to determine whether the project received "material assistance" during construction from a "prohibited foreign entity."

The One Big Beautiful Bill Act reshapes clean energy incentives--phasing out certain tax credits, adjusting domestic content rules, and limiting eligibility for projects tied to foreign entities. ...

Congress capped total allocations at \$10 billion, including \$4 billion reserved for projects in low-income or disadvantaged areas, and required applicants to secure Treasury certification within ...

Energy storage escaped much of the pain inflicted on solar in the recent legislative changes, but foreign entity restrictions may create some supply-chain challenges.

To qualify, these projects must either be completed by the end of 2027 or begin construction within the next 12 months. This compressed timeline will likely force developers to ...

Changes in the construction entities of energy storage projects

At various points, the "One Big Beautiful Bill" (OB BB) included an elimination of investment tax credits (ITCs), a 60-day construction commencement requirement and other provisions that ...
