To meet China's goal of carbon neutrality by 2060, substantial investment in upgrading power systems needs to be made to optimize the deployment of new photovoltaic and wind power ...

China will need to install around 10,000 gigawatts of wind and solar capacity to reach carbon neutrality by 2060, according to new research.

Since the early 2000s, the manufacturing hub on China's east coast has been harnessing local wind power resources -- which can blow 2,800 hours a year on land and 3,300 hours at sea -- ...

China is the dominant force in next-generation energy technologies today. It's pouring hundreds of billions of dollars into putting renewable sources like wind and solar on its grid,...

In the 12 months to June 2025, wind and solar generated more electricity than hydro, nuclear, and bioenergy for the first time. Just four years earlier, they produced only half as much. This...

China is racing to develop a new generation of wind farms that can not only survive tropical cyclones, but also harness their power.

China is adding more solar and wind power to its energy grid than any other economy - but that huge buildout has its challenges. Here's what we can learn

These bases, a combination of vast solar arrays and wind farms, are to be connected to markets in eastern China through high-speed transmission lines. The projects take advantage both ...

This review further proposes a strategic roadmap for sustainable development, emphasizing the integrated deployment of wind and solar as the dominant sources of power generation.

Changyou works on wind power generation

That means even higher wind power generation totals can be expected going forward, ensuring that China will retain its position as the global wind sector leader.
