---

There are many types of solar power generation, mainly tower system, trough system, disk system, solar cell, solar tower thermal power generation and so on five kinds. The first three are ...

Concentrated solar power (CSP), also called concentrating solar power or concentrated solar thermal, involves systems that collect solar heat for multiple purposes like cooking, desalination, or the ...

This paper evaluates scenario generation methods in the context of solar power and highlights their advantages and limitations, and introduces taxonomies based on weather classification techniques ...

Considering the need to improve the SPF efficiency, such classifications allow for important comparative conclusions to be drawn, depending on the location of each case and the meteorological data available.

Considering the need to improve the SPF efficiency, such ...

CSP is a class of power generation technology with several sub-types or variants that are distinctly different, but all share key attributes that label them as CSP technologies.

Hence, this study proposes the Extreme Gradient Boosting regression-based Solar Photovoltaic Power Generation Prediction (XGB-SPPGP) model to predict and classify the usage of ...

The submitted article aims to provide a taxonomy of recent works focused on solar power forecasting. Taking into consideration the geographical location of the datasets of each of the ...

Fine-grained weather classifications can significantly improve the overall quality of the generated scenario sets. The performance of different scenario generation methods is strongly related...

For the first time, this work summarized and compared around 143 CSP projects worldwide in terms of status,

capacity, concentrator technologies, land use factor, efficiency, country ...
