-----

Through theoretical studies, first we demonstrate that the photonic glass self-assembled by high-index microspheres could enable both colored solar cells and modules, with easily variable ...

Our product has no paint or tint, but only atomic deposition transforming the solar glass into a coloured one. Our coloured modules have no blinding effect (gloss index), are mat, and opaque with no visible ...

How do you pack the solar panels for overseas shipments?

These are just a few examples of how we can customize the photovoltaic glass to suit any project. If you're looking for a specific color or would like to receive samples, feel free to contact us for more ...

The key is the SpriColor-PV glass, solar modules are adaptable individually, uniquely designed with color, motif and/or design. Play with a countless range of colors for aesthetically, high-efficient solar ...

Double layers of tempered glass to meet the requirements of building safety: with fireproofing, better wind load, heat resistance and frost resistance. Be used as building unit for integrated installation.

Here is a guide to the latest technological and market innovations in colorful photovoltaic panels for construction

Roofs and facades truly stand out with modules produced using colored glass by Kromatix(TM) (solar glass innovated by SwissINSO) or technology by Solaxess, where solar cells are almost invisible.

Kromatix specializes in the design of innovative building materials in the form of colored solar facades. Combining aesthetics and performance, Kromatix aims to optimize the capture of solar ...

Our cutting-edge products merge aesthetic beauty with exceptional functionality, making them ideal for innovative energy solutions. With top-notch OEM services customized to your requirements, our ...
