How many solar PV installations are there in Australia?

As of 30 September 2025, there are over 4.22 million PV installations in Australia, with a combined capacity of over 43.0 gigawatts. The following graphs show the rated capacity of solar PV installed in each month. The rate of installations has been influenced by changes in the policy mechanisms that have supported this technology.

How big is Australia's solar industry?

Australia remains a world leader in per-capita solar uptake, with over 40.7GW of cumulative solar capacity now installed. The 2025 SunWiz PV Market Report provides valuable insights into the state of Australia's solar industry.

Are solar farms a viable option for Australia's energy landscape?

While the initial investment and land-use issues present challenges, the long-term environmental and economic benefits are undeniable. As solar technology costs continue to decline, and with government support, solar farms will become an even more viable and essential component of Australia's energy landscape.

How much does a solar farm cost in Australia?

Maintenance: Although solar farms have lower maintenance costs than traditional power plants, periodic cleaning and repairs are essential to ensure maximum efficiency. According to recent estimates, the cost of setting up a solar farm in Australia can range between \$1 million to \$1.5 million per megawatt (MW) of installed capacity.

While rooftop solar thrived, large-scale solar farm construction continued to struggle. The report highlights that only 1.32GWac (~1.60GWdc) of solar farm capacity was completed in 2024, ...

New analysis in the CSIRO's 2023-24 GenCost report shows the cost of large-scale solar has fallen in the past decade by 8%, while onshore wind rose 8%. Both remain the cheapest ...

Australia's Commonwealth Scientific and Industrial Research Organisation (CSIRO) has revealed that large-scale solar PV capital costs have fallen by 8% in Australia for the second...

Cost of a large-scale pv distribution in australia

Delve into the key aspects of solar farms in Australia, breaking down their costs, advantages, and disadvantages.

New analysis in the CSIRO's 2023-24 GenCost report shows the cost of large-scale solar has fallen in the past decade by 8%, while onshore wind rose 8%, and both remain the ...

Task 1 activities support the broader PVPS objectives: to contribute to cost reduction of PV power applications, to increase awareness of the potential and value of PV power systems, to foster the ...

Monthly, per-postcode aggregated PV installation data is updated quarterly and available for download from the Clean Energy Regulator. The energy generated by distributed PV systems in each State ...

In a significant stride towards a greener future, the capital costs for large-scale solar photovoltaic (PV) projects in Australia have decreased by 8% for the second consecutive year.

The purpose of this scenario was to assess the cost of an energy system supported by large-scale grid battery storage, which typically needs a reduced level of solar and wind capacity.
