How can Djibouti lower its energy prices?

Djibouti can reduce energy prices by diversifying energy sources toward renewables. The free port of Djibouti finances its own power supply but is not entitled to sell its surplus energy. A regulator is needed to fairly and effectively regulate electricity prices in Djibouti.

What is the source of Djibouti's energy?

Approximately 65 percent of Djibouti's electricity comes from external sources. The remaining energy comes from its own geothermal, solar, wind, and biomass sources. According to the International Renewable Energy Agency (IRENA), this reliance on imported energy can lead to price volatility that can hinder economic development plans.

How does electricity supply work in Djibouti?

Electricity supply services are provided through the vertically integrated utility Electricité de Djibouti (EDD). A small amount of additional energy is generated by a solar plant (300 kW capacity). Djibouti has wind and geothermal generation potential and is actively studying these options.

Will Djibouti be self-sufficient in energy production in 2035?

In December 2023, the Republic of Djibouti signed up to the African Green Hydrogen Alliance. The country's formidable prospects in terms of renewable energy means that Slim Feriani can look to the future with confidence. "The objective for 2035 is to be self-sufficient in energy production," he says. "We should get there before then.

Working hand in hand with the Ministry of Energy, the United Nations is supporting Djibouti in transforming abundant sunlight into affordable, reliable and clean energy for all.

Almost a fifth of the electricity consumed is generated from fossil fuels, which contribute to pollution and climate change. Meanwhile, close to 10% of Djibouti's electricity comes from low-carbon sources, ...

Djibouti has unveiled one of its most ambitious energy programmes yet -- a nationwide solar-storage grid designed to eliminate chronic power cuts, reduce electricity import dependency, ...

challenges in ensuring reliable access to electricity for its growing population and economy. By the end of

Djibouti clean electricity

2022, approximately 60-80% of Djibouti's annual electricity consumption.

Djibouti is on an ambitious path to achieve energy autonomy by 2035, aiming to produce 100% of its electricity from renewable sources. Under the guidance of Energy Minister Yonis Ali ...

In September 2023, Djibouti inaugurated its first wind farm in the north of the country. Add solar farms, geothermal power and biomass plants, and Djibouti hopes to become the first ...

The development of renewable energy in Djibouti has become a national priority as the country aims to achieve 100% energy generation from renewable sources. Situated in the Horn of ...

Djibouti's Vision 2035 aims to achieve universal electricity access and power the nation with 100% renewable energy. Already, it sources approximately 65% of its electricity from Ethiopia (mainly ...

In Djibouti, a joint programme led by the United Nations is transforming the country's abundant sunlight into affordable, reliable, and clean energy, creating both new economic ...

This interconnection enhances grid stability and facilitates the import of clean energy from Ethiopia, which already generates a significant portion of its electricity from renewable sources. Additionally, ...
