How much power does a string inverter solar system produce?

This 15kW string inverter solar panel kit greatly surpasses most electric bills in the United States,which average 920kWh per month. This system requires 874 square feet of space and produces 1,400 to 3,000 kilowatt hours(kWh) of alternating current (AC) power per month,assuming at least five sun hours per day with the solar array facing south.

Are string inverters a good option for home solar?

When powered by full sunlight,string inverter systems are a cost-effective solutionfor home solar installations. An unobstructed south-facing view of the sun will maximize your solar power. If your system is partially shaded by trees,chimneys or other obstructions,the string inverter output will drop along with the output of the whole system.
