-----

In the Galapagos island region of Ecuador, there are several sources of energy resources, many of which are not used for the benefit of the communities. This study uses a load profile of a community ...

A Brief Approach of Microgrids Implementation in Ecuador: A Review MR Mauricio Rodr#237;guez AS

This study describes the main policies and laws in force for implementing microgrids in Ecuador. Finally, a discussion related to the feasibility of the inclusion of energy solutions based on microgrids for ...

A long-term significant, sustainable increase of renewables share in the energy mix of Ecuador can be realized through the application of microgrids (MG) technologies in remote areas ...

Abstract: In rural territories, the communities use energy sources based on fossil fuels to supply themselves with electricity, which may address two main problems: greenhouse gas emissions and ...

Thus, the present work addresses the development of autonomous electrification systems for isolated communities in the Amazon Region of Ecuador (RAE) by optimizing the design of PV-based systems ...

This paper develops an optimization model to determine the optimal sizing, the total annual investment cost in renewable generation, and other operating costs of the components of a hybrid microgrid.

The method for the optimal design of hybrid microgrid is analyzed in six operating scenarios considering: (1) 24-hour continuous power supply; (2) load shedding percentage; (3) diesel ...
