Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.

Data from the US Energy Information Administration (EIA) shows that battery energy storage and solar are dominating capacity additions, while fossil fuel capacity continues to net a ...

Component	Functions	27	Battery
Management Systems and Environmental Control		27	Inverters ...

"Battery storage, wind, and natural gas power plants account for virtually all of the remaining capacity additions for 2025," EIA said in an Aug. 20 note.

In 2025, capacity growth from battery storage could set a record as operators report plans to add 19.6 GW of utility-scale battery storage to the grid, according to our January 2025 ...

The U.S. Energy Information Administration (EIA) expects utility-scale solar and battery storage to lead new generating capacity additions in 2025. Following a record growth in utility-scale ...

EIA has also estimated that U.S. battery storage capacity could increase by 89% by the end of 2024. This growth depends on developers bringing planned energy storage systems online by ...

Executive Summary In this work we describe the development of cost and performance projections for utility-scale lithium-ion battery systems, with a focus on 4-hour duration systems. The projections are ...

The US Energy Information Administration (EIA) says that battery storage capacity grew by 13,809 MW in the past 12 months and is projected to expand by another 22,053 MW as solar ...
