Distributed Energy Resources (DERs) are small, modular energy generation and storage technologies that provide electric capacity or energy where it is needed.

A Practice Note discussing the process of connecting an energy generating or battery storage facility to the electric grid and the legal and regulatory framework applicable to the interconnection process.

Energy storage, with its versatile applications as a simultaneous load, generation, and ancillary service resource, is poised to provide flexibility to large electricity customers that seek to ...

Energy storage can take many forms, and can involve the storage of electricity directly or as potential (or kinetic) energy that can be used to generate electricity when it is needed.

For example, electricity storage can be used to help integrate more renewable energy into the electricity grid. Electricity storage can also help generation facilities operate at optimal levels, and ...

Our goal is to give an overview of the profitability of business models for energy storage, showing which business model performed by a certain technology has been examined and identified ...

Energy storage systems (ESS) can store power from any generation source, such as solar panels, a generator or the utility grid itself. That power can be used immediately to run electrical loads in your ...

Energy storage, with its versatile applications as a simultaneous load, generation, and ancillary service resource, is poised to provide flexibility to large ...

"Through this new offering, Generac is proud to have the most comprehensive, end-to-end solution - one that combines solar, battery storage, generators and load management," said ...

Energy storage can be sold to generator customers

An energy storage system (ESS) for electricity generation uses electricity (or some other energy source, such as solar-thermal energy) to charge an energy storage system or device, which is discharged to ...

While generators provide immediate power backup, energy storage systems offer a more sustainable and long-lasting solution, as they can connect with the grid, batteries, and even ...
