This report comes at a defining moment. In 2025, Europe's battery storage market entered a new phase of scale and maturity. With 27.1 GWh of new capacity installed, the European ...

Higher retail electricity prices following the energy crisis, along with strong policy support, have encouraged individuals and businesses to install solar PV systems with the aim of reducing their ...

Nonetheless, it was the second year in a row that more than a million European homes installed battery storage, typically co-located with solar PV systems and with Germany and Italy as ...

The EU installed 27.1 GWh of new battery storage capacity in 2025, a new record year powered by strong utility-scale deployment, according to SolarPower Europe.

The European Union's battery storage sector achieved a historic milestone in 2025, adding a record 27.1 GWh of new capacity. This 45% annual surge pushed total operational storage to 77.3 ...

The Member States will also be encouraged to incentivise the installation of solar energy storage devices, support energy communities and evaluate electricity tariffs, for instance in light of ...

With solar energy mainstreaming across the continent, now is the time for European decisionmakers to put batteries at the centre of a flexible, electrified, energy system.

Welcome to our European Market Outlook for Battery Storage 2025-2029 Though the battery energy storage revolution continued to unfold across Europe in 2024, setting yet another annual installation ...

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example ...

European union energy storage solar project installation

The project demonstrates European Energy's approach to enhancing asset value through storage integration and flexible system operation. The battery enables electricity generated during ...
