This paper discusses the importance of advanced clean electricity technologies to creating secure, reliable, carbon-free electricity systems, and argues that companies can play a catalytic role by ...

Vodafone has decoupled data growth from energy use and carbon emissions. We deliver this through a constant drive to improve energy efficiency across all areas of our business ...

Looking to reduce your carbon footprint? These 21 actionable tips cover energy, food, travel, and lifestyle choices that make a real impact.

In July 2020, Vodafone committed to helping its business customers reduce their own carbon emissions by a cumulative total of 350 million tonnes globally over ten years between 2020 and 2030 - ...

Here we analyse the scenarios consistent with limiting warming to 2 °C or below regarding the speed, trajectory, and feasibility of different fossil fuel reduction pathways.

Companies are increasingly becoming aware of their carbon footprint and its intrinsic link to energy use. But exactly what is a carbon footprint, and how can renewable energy reshape the business landscape?

Carbon offsetting is increasingly being deployed by companies as a means of reducing their carbon emissions when reduction alone isn't enough. It allows them to take responsibility for ...

Experts say that it is critical to reduce carbon emissions from fossil fuels while investing in carbon sequestration technologies both in terrestrial and marine ecosystems in order to achieve ...

Carbon removal is increasingly viewed as a key step on the road to achieving net zero by 2050. Using trees, soil, farming techniques, the ocean and direct air capture can all reduce the ...

The study concludes that developing green and sustainable-energy economies requires innovative technologies
