-----

Glass/Glass modules withstand air and moisture and offer best cell protection, while plastic backsheets of glass/foil modules become porous. The Glass/Glass composite protects solar cells against micro ...

In the study, Fraunhofer ISE calculated the CO2 footprint of six monocrystalline silicon photovoltaic modules. Modules manufactured in China, Germany and the European Union, as well as a module ...

Using a life cycle analysis (LCA), the research team compared the CO2 footprint of monocrystalline solar modules manufactured in Germany, Europe and China.

Our glass-glass series meets the highest safety requirements and resilience ...

Our glass-glass series meets the highest safety requirements and resilience thanks to its double-glass construction with tempered anti-reflective glass. This significantly minimises the risk of microcracks, ...

What this means for you: You can specify Polaris with the same confidence as standard architectural laminated glass. It protects occupants and meets the safety requirements for vertical ...

The Germany market for glass used in photovoltaic (PV) modules has experienced consistent growth driven by the expanding solar energy sector and increasing investments in renewable infrastructure.

Our transparent modules with crystalline solar cells are available in a wide range of colors. Depending on the desired color and surface effect, special design cells or wafer-thin color overprinting of the ...

STANDARD SOLAR PANEL GermanSolar's Standard Solar Panel is High efficiency, convenient and easy to use

Due to its light-focusing structure, high light transmission, and low reflection, this material is ideal as front glass in PV modules. Grenzebach supplies the optimal production technology for float glass and has ...
