Data shows that there's been significant progress in the production of solar and wind power over the past two decades.

In this interactive chart, we see the share of primary energy consumption that came from renewable technologies - the combination of hydropower, solar, wind, geothermal, wave, tidal, and modern ...

Top 10 states for electricity generated from solar (utility-scale and small-scale) and wind in 2024. Find data for all 50 states and Washington, D.C. in the full dataset.

Combined Wind and Solar is a graphical representation of estimated wind and solar power production amounts for the Current Operating Day and the Next Day.

To study America's growing renewable electricity capacity and generation, Climate Central analyzed historical data on solar and wind energy over a 10-year period (2014 to 2023).

In a separate chart (below), we get combined annual solar and wind electricity generation share for some of these markets, as well as their maximum hourly generation share.

The US clean electricity transition continued as wind and solar generated more than coal for the first time. Electricity demand growth sped up and solar generation rose more quickly than gas ...

In addition to changes to NEMS, we also updated the way we calculate primary energy consumption of electricity generation from noncombustible renewable energy sources such as solar, ...

ISEP Energy Chart provides interactive graphs on Electricity Generation and Demand, Renewable Energy Share in Electricity, Cumulative Installed Capacity (Electricity or Heat), and Bar Chart Race ...

Graph of wind and solar power generation

This dataset contains yearly electricity generation, capacity, emissions, import and demand data for over 200 geographies. You can find more about Ember's methodology in this ...
