Federal agencies are delaying approvals for renewable energy projects on both federal land and private property at a time when electricity demand is going up.

Since taking office, the Trump administration has paused permits on all new wind and solar projects on public land, onshore and offshore.

The Energy Information Administration (EIA) reported that, in 2024, the United States added a record 30 gigawatts (GW) of utility-scale solar to the grid, accounting for 61% of new ...

The Energy Information Administration, in its Short-Term Energy Outlook, is predicting a slowdown in the deployment of solar capacity in the United States, even before the Trump ...

U.S. President Donald Trump's scrapping of subsidies and tax breaks for renewable energy developers has stalled but not derailed solar power capacity growth across the United States.

The United States conducted much early research in photovoltaics and concentrated solar power. It is among the top countries in the world in electricity generated by the sun and several of the world's ...

Even as the Trump administration rolled out a series of anti-clean energy policies, solar and storage still accounted for 82% of all new power added to the grid in its first six months.

Despite the Trump administration's wide-ranging attacks on ...

Last year, the U.S. saw additions of about 45 GW of solar and wind combined. This increase from 2023 shows robust progress, but we still need more growth in carbon free generation ...

Despite the Trump administration's wide-ranging attacks on renewables like wind and solar power, the

Has the United States given up on solar power

clean-energy industry is on pace for record growth this year, according to ...

New solar plant projects are also starting up in MISO. We expect MISO solar generation to grow from 31 BkWh in 2025 to 46 BkWh in 2027. Natural gas is the largest source of electricity in ...
