How long does it take a queen to lay eggs?

Drones and queens may fly a mile or more to drone congregation areas. Queens will begin laying eggs 2 to 4 days after mating. Mating can be delayed up to 3 weeks and still be successful. The following books all describe in detail, various methods of raising from one to a thousand queens.

How long does it take a queen to mate?

Queens are ready to mate 5-7 days after hatching. Temperature must be at least 69 F with no strong winds. Virgin queens mate with 10 to 20 drones on one or more flights. Drones and queens may fly a mile or more to drone congregation areas. Queens will begin laying eggs 2 to 4 days after mating.

What happens if a queen mate without weather delay?

Day 27 - If queens mate without weather delay, they should now be laying eggs. Weather delays in mating will add days to the process, after 3 weeks delay, virgin queens may start to lay unfertilized eggs. Time your activities so that warm temperatures and drones are available when the queens are ready to mate.

How do you mate a queen hive?

Leave one cell behind to replace the queen. Keep queen cells warm (80-94 F) until they are placed in queenless hives (mating nucs). Day 22 - Virgin queens are ready to mate. They require nice weather (69 F), and an abundance of drones to mate with. A few colonies within a mile are adequate for providing drones for mating.
