How many Watts Does a solar panel produce?

Solar panel power output can get confusing fast. Is 400 watts good? 420 watts? Should you opt for the 450-watt panel? Is it worth the extra cost? About 97% of home solar panels installed in 2025 produce between 400 and 460 watts, based on thousands of quotes from the EnergySage Marketplace.

How many Watts Does a solar panel produce in 2025?

About 97% of home solar panels installed in 2025 produce between 400 and 460 watts, based on thousands of quotes from the EnergySage Marketplace. But wattage alone doesn't tell the whole story. In fact, efficiency matters more than wattage when comparing solar panels--a higher wattage can simply mean that a panel is larger.

How much power does a home solar panel produce?

About 97% of home solar panels included in EnergySage quotes today have power output ratings between 400 and 460 watts. The most frequently quoted panels are around 450 watts, so we'll use this as an example.

How many solar panels do I Need?

Your panels' actual output will depend on your roof's shading, orientation, and hours of sun exposure. The efficiency and size of your solar panels drive their power output. You'll need between 15 and 22 solar panels to cover your home's electricity usage. Note: These costs are based on EnergySage Marketplace data.

Solar panel wattage is the standard unit for measuring how much power a solar panel can produce. Discover factors impacting this so you can get the most energy.
