Why does a heating system consume energy from a battery?

Working with some inverters, heating system may consume energy from battery when there's voltage difference among system modules, between 0#176;C/32#176;F to 5#176;C/41#176;F. Follow 5.3.3 of this manual for multiple batteries power cable connection to minimize influence of the circular current, thus decrease battery energy loss.

Can a battery be connected to a busbar with power cable?

can be connected to a busbar with power cable. The length, thickness, material, and resistance of the cables connected in parallel must be the same. Warning: Batteries connected in series are forbidden, high voltage would lead to hazard shock.

How to connect a battery to an energy storage inverter?

10 10.4 It should be > 6 AWG. Connect the positive and negative poles of the battery to the positive and negative terminal of the DC port of the energy storage inverter (or the junction box) with a red and black cable respectively. The connection of several batteries is only permitted in parallel.

If you need to store the battery for a long time, please charge and discharge the battery every three months to ensure the best performance, and the best state of battery power for storage is Between ...
