Announcing this infrastructure roll out. Launched by ZEVI in January 2023, the National EV Charging Infrastructure Strategy presents an ambitious pathway and practical steps for the delivery.

Public EV charging infrastructure in Ireland has expanded rapidly. As of 2024, there are more than 2,000 publicly accessible charge points nationwide. Most are operated by ESB ecars, with ...

EVCAI brings together charging infrastructure providers operating and/or aiming to operate on the island to create a shared vision for Ireland's charging network.

Summary: Ireland's EV charging opportunities span policy-driven targets, shared economy models, corridor fast charging, fleet electrification, and digital innovation--each central to long-term success.

Analysis: Despite the big push to get drivers into electric cars, there are still many challenges with the Irish charging infrastructure. The Government's National Road Network Plan...

The State, through Transport Infrastructure Ireland and ZEVI, has played a significant role in accelerating delivery, with three grant schemes rolled out between 2024 and 2025 to support ...

Teresa Fallon, High-Power Infrastructure Lead at Zero Emission Vehicles Ireland (ZEVI) outlines the development of Ireland's National EV Charging Infrastructure Plan.

Launched in Jan 2023, the Electric Vehicle Charging Infrastructure Strategy 2022-2025 sets out the ambition and strategy for the delivery of a national EV charging network, and the ...

Ireland is set to significantly expand its electric vehicle (EV) charging infrastructure with the addition of 53 new high-powered charging hubs, supported by EUR7.9 million in government funding.

Ireland electric vehicle charging infrastructure

Electric vehicles (EVs) sit at the heart of Ireland's climate plans, but the pace of charging infrastructure roll-out isn't yet matching the scale of our national ambition. The gap is...
