Does stationary battery storage fit into local land-use plans and zoning regulations?

This issue of Zoning Practice explores how stationary battery storage fits into local land-use plans and zoning regulations. It briefly summarizes the market forces and land-use issues associated with BESS development, analyzes existing regulations for these systems, and offers guidance for new regulations rooted in sound planning principles.

What zoning does a Bess system need?

These systems are being deployed as part of utility substations and transmission systems and as part of solar and wind electric generation projects. Depending on state enabling legislation, some BESS will be exempt from local zoning, such as when BESS is part of renewable energy or transmission projects that are exempt.

Is Bess exempt from local zoning?

Depending on state enabling legislation, some BESS will be exempt from local zoning, such as when BESS is part of renewable energy or transmission projects that are exempt. However, BESS have potential applications across the rural-to-urban transect, and most communities will need to address BESS in some form.

Do you need additional requirements for a Bess site?

In the evolving world of renewables and power delivery, additional requirements may need to be considered by all stakeholders, including developers, contractors, and owners during the development, design, and construction phases of BESS sites. Connect with an expert.
