---

These events highlight the growing pains of integrating large scale battery energy storage projects into the grid, underscoring the importance of advancing safety measures as storage systems continue to ...

Massachusetts is making a big push for batteries -- not the kind you put in a flashlight, but powerful, tractor trailer-sized batteries that store energy for the electric grid. State...

Lithium-ion batteries are increasingly being used to store power for electrical grids, but some localities are concerned about fire risks.

Main Considerations for Safe Installation and Incident Response Battery Energy Storage Systems Overview  
Battery energy storage systems (BESS) stabilize the electrical grid, ensuring a steady flow ...

In the wake of the largest battery storage fire in U.S. history, Monterey County, California, is advancing a moratorium on new battery energy storage facilities following the January 2025 blaze ...

The US Energy Storage Monitor is a quarterly publication of Wood Mackenzie Power & Renewables and the American Clean Power Association (ACP). Each quarter, new industry data is compiled into this ...

Lithium battery energy storage systems (BESS) are now an essential part of the world's energy transition. These systems store electricity from wind, solar, and other clean power and help ...

Proponents maintain that state-of-the-art battery energy storage systems are safe, but more localities are enacting moratoriums.

A massive fire broke out at a lithium-ion battery storage facility in Moss Landing, prompting evacuation orders.

# Lithium battery energy storage January-October

Energy storage supports the electric grid by storing excess power - such as midday solar - and delivering it when generation is low, including during cloudy days or calm, windless periods.
