OverviewStructurePerformanceSynthesisHistoryPropertiesUsageLithium nickel manganese cobalt oxides (abbreviated NMC, Li-NMC, LNMC, or NCM) are mixed metal oxides of lithium, nickel, manganese and cobalt with the general formula $\text{LiNi}_x\text{Mn}_y\text{Co}_{1-x-y}\text{O}_2$. These materials are commonly used in lithium-ion batteries for mobile devices and electric vehicles, acting as the positively charged electrode, commonly called the cathode (though when charging it is actually the anode). When ...

Cylindrical cell format is expected to hold a significant share of the market, followed by prismatic and pouch formats. North America and Asia Pacific are anticipated to be the leading ...
