Electricity grid performance and energy management is key for Oslo to achieve its net zero transition by 2030. This pilot will focus on supporting emissions-free energy supply to construction machinery and ...

The ZEESA research project aims to provide knowledge on how best to develop integrated renewable energy systems for demanding Arctic conditions. The project is a "Competence ...

To create a society without greenhouse gas emissions, we must convert from using fossil energy to using renewable energy. The Climate and Energy Strategy describes how we can achieve our ...

Oslo will have a circular waste and wastewater management system based on reuse, material recycling and energy recovery that does not produce greenhouse gas emissions.

With projects like zero-emission construction and restoring natural habitats, Oslo shows how collaboration between the government and community can make a big difference. In 2020, Oslo ...

Recent research shows an increase in climate investments of 60% just from 2021 to 2022 in Oslo. Of the many green investment areas in Oslo, renewable energy has proved to be particularly ...

By 2013 all municipal buildings were using 100% renewable energy, and from 2014 all new municipal buildings had to be of Passive House construction. Today, the city's heating system is ...

Oslo sources a share of renewable energy (RE) for public mass transit (such as biofuel in their mass transit fleets). Oslo also uses a share of RE sources to provide electricity for every other sector of the ...

To boost its low-carbon electricity generation, Norway should consider scaling up investments in both nuclear and solar energy, providing a robust complement to its hydropower dominance.

Norway already produces 98% of electricity from renewables, which is above the global share of 60%

Oslo renewable electricity

renewable electricity set out in the IEA Net Zero Emissions scenario.
