As such, the aim of this project is to investigate the feasibility of utilizing smart inverter advanced grid support functionalities to alleviate transmission voltage issues while also avoiding the potential ...

On November 17, 2022, the Federal Energy Regulatory Commission (FERC or Commission) issued a Notice of Proposed Rulemaking (NOPR) that focuses on reliability issues related to the growth of ...

FERC today directed new reliability standards to protect the grid as the nation makes the transition to expanded use of clean energy technologies.

Interconnection standards define how a distributed generation system, such as solar photovoltaics (PVs), can connect to the grid. In some areas of the United States, the interconnection ...

The proposed PV may require a new interconnection transmission line to this new station depending on the location of the PV site. This option may allow the PV plant to operate even if the line either to ...

The upcoming changes to US regulations for grid-tied inverters aim to modernize the power grid and enhance its reliability. These updates touch on several critical areas, from safety ...

The project team provides leadership and technical assistance in partnering with industry experts for accelerating revisions to these foundational codes and standards governing PV system ...

Power purchase agreement (PPA) A financial mechanism through which a bulk electricity customer enters into a long-term electricity supply contract with an IPP.

Standards: IEEE 1547-2018 (interconnection), UL 1741 (inverter certification). Typical Voltages: 4.16 kV (delta), 12.47 kV/13.2 kV (wye), 34.5 kV (sub-transmission). Capacity Threshold: ...

Efficiency, cost, size, power quality, control robustness and accuracy, and grid coding requirements are among the features highlighted. Nine international regulations are examined and ...
