---

Standard Specifications for Concrete Structures (JSCE-SSCS), which show the model for plan, design, execution, maintenance and repair of concrete structures, have been highly ...

Driven piles to support ground mount solar systems are typically lighter duty than those used for other structural applications with pipes typically in diameters ranging from 4 to 8 in. in diameter and H-piles ...

Piles tested at Site 1 were either single- or double-helix piles (pile types SP1 and SP2) with a shaft diameter of 89 mm, a wall thickness of 6.5 mm, a length of 4.5 m, a helix diameter of 304 ...

Projects requiring high load capacities--such as those with large, heavy solar panels or in regions with significant wind forces--may necessitate the use of concrete or composite piles. ...

For illustration and purposes, the following figures provide a sample of the input modules and results obtained from an spMats model created for the ground mounted PV solar panel reinforced concrete ...

What determines my North to South pier spacing? North to South pier dimensions are static measurements in our Ground Mount design that are either 7.5" or 9", depending on the number ...

Concrete piers are the standard, but there are other options like spread footing, a concrete foundation with a wider bottom segment for when a structure needs extra stability; ...

In general, the most commonly implemented foundations for solar trackers consist of direct drilled, precast and cast-in-place concrete piers, along with precast concrete piers, and driven and ...

Concrete ballast: Either precast or cast-in-place, concrete ballast is a practical foundation solution on re-purposed brownfield sites, landfills with membrane caps, environmentally remediated/closure sites ...

# Photovoltaic cement pile support spacing standard

This Standard provides a guideline for an engineering approach to the design and subsequent installation of pile foundations. The purpose is to furnish a rational basis for this process, taking into ...
