This microcredential introduces learners to the core elements of energy storage system (ESS) installation and the critical steps in photovoltaic (PV) system commissioning.

Solar design and installation training prepares workers to properly design, install, and maintain solar energy assets.

This course teaches how to design PV systems for off-grid and grid-tied applications. It includes designing for PV well pumps, remote lighting, off-grid living, grid-tied systems with backup energy ...

The Solar PV Installation and Design Training Program is designed to provide participants with comprehensive knowledge and practical skills essential for a successful career in the photovoltaic ...

This training series is designed to help professionals learn how to minimize fire, electrical, and life safety hazards related to PV and ESS installations.

This rapid expansion underscores the growing need for skilled professionals who can effectively design, install, and manage solar energy systems. This training delves deep into the fundamentals of solar ...

Launch your career in solar O& M with industry-leading training designed for entry-level technicians. Master essential safety protocols, system components, and maintenance fundamentals for utility ...

This course focuses on grid-direct PV systems, but covers material critical to understanding all types of PV systems. These core concepts are expanded on in SEI's upper ­level PV courses.

This collection of courses provides advanced training focused on the critical electrical skills needed to safely and effectively work with renewable energy technologies, including solar PV and battery ...
