---

The Solar Energy Industries Association (SEIA) has released a whitepaper recommending the US deploy 10 million distributed solar installations and reach 700GWh of installed energy storage ...

A record 10.3 GW of grid-scale storage was added in 2024, and this record is expected to be smashed in 2025. The EIA expects 18.2 GW of utility-scale battery storage capacity installations...

Depending on the data, this can include standardizing country names and world region definitions, converting units, calculating derived indicators such as per capita measures, as well as ...

We expect 63 gigawatts (GW) of new utility-scale electric-generating capacity to be added to the U.S. power grid in 2025 in our latest Preliminary Monthly Electric Generator Inventory ...

A record-breaking 346 MW of residential storage was installed in Q3 2024, a 63% increase over the previous quarter. California, Arizona, and North Carolina led growth, installing 56%, 73% and 100% ...

Pumped hydro Other storage Appears in Batteries and Secure Energy Transitions - Executive summary Notes  
GW = gigawatts; PV = photovoltaics; STEPS = Stated Policies Scenario; ...

To facilitate the rapid uptake of new solar PV and wind, global energy storage capacity increases to 1 500 GW by 2030 in the NZE Scenario, which meets the Paris Agreement target of ...

The US solar industry installed 7.5 gigawatts-direct current (GWdc) of capacity in the second quarter of 2025, a 24% decline from Q2 2024 and a 28% decrease compared with Q1 2025.

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

# Photovoltaic energy storage installed capacity

Solar, wind, and batteries are set to supply virtually all net new US generating capacity in 2026, according to the latest EIA data.
