-----

Poland generated more electricity from renewables than coal for the first time in June, marking a key moment in the country's efforts to cut its reliance on the most polluting fossil fuel.

According to preliminary estimates from think tank Energy Forum, renewable energy sources accounted for 44.2 per cent of Poland's electricity mix in June 2025, coming out just ahead ...

Expanding and upgrading of Poland's electricity transmission network is a key element to meet its EU goals of increasing renewable energy sources, improving energy efficiency, and better ...

Poland is aiming for 51% of renewable electricity generation and 64 GW of renewable capacity by 2030, including almost 6 GW of offshore wind. Poland is rapidly moving from coal to ...

Discover all statistics and data on Renewable energy in Poland now on statista !

In June 2025, all renewable energy sources (RES) in Poland produced 44.1 per cent of electricity, while coal and lignite plants produced 43.7 per cent, according to preliminary estimates...

Poland generated a record 28.8% of its electricity from renewables in 2024, up from 26% the previous year. Despite this growth, coal continues to be the primary source of electricity, ...

In recent years, Poland has been reducing its reliance on coal, increasing its wind and solar power capacity, and introducing nuclear power to diversify its energy mix and reduce carbon emissions.

Coal dominates the power sector of Poland, where it is the largest source of greenhouse gas emissions and a major employer. While the country has experienced strong growth in renewable energy over ...
