Our analysis highlights the feasibility, advantages, and challenges of implementing V2X in urban settings, underscoring its significant role in transitioning to a resilient, low-carbon urban energy system.

In this study, we developed a new user equilibrium (UE) model to depict the equilibrium conditions in a road network in which bidirectional charging lanes are deployed.

We propose a multi-type bidirectional power transfer network and minimize the system cost by determining facility siting and pricing, which can be modeled as a bi-level optimization problem.

In our The smarter E podcast, he provides insights into the current turbulent market development and talks about how forecasting errors affect the entire industry and what future ...

Through V2G, bidirectional charging could be used for demand cost reduction and/or participation in utility demand response programs as part of a grid-efficient interactive building (GEB) strategy.

MCSs eliminate the cost of purchasing or leasing land for fixed charging stations (FCSs), especially in city centers with limited suitable locations for building FCSs.

In this work, a novel energy storage system consisting of a hybrid storage system and an intelligent and bidirectional charging station was shown. The technical properties of the storage ...

Using data from existing ports, the results demonstrate that the optimised reefer charging plan significantly reduces energy costs and alleviates peak energy consumption, consistently ...

To enable bi-directional charging, EVs require specialized charging equipment and onboard vehicle

Price Reduction for Bidirectional Charging of Mobile Energy Storage Containers for Highways

technology that allows the bidirectional system to communicate with the grid.

Bidirectional vehicles employed for building resilience and or load management may qualify for mobile storage financing with various FEMP programs (UESC, ESPC, ESPC ENABLE, AFFECT). Learn ...
