How do you calculate the annual cost of powering a rack?

The annual cost of powering a rack is determined by its IT power, the facility's PUE, continuous operation (8760 hours/year), and local electricity rates. Annual Cost = Rack IT Power (kW)  $\times$  PUE  $\times$  8760 hours/year  $\times$  Electricity Rate (\$/kWh). This cost factors in IT equipment, cooling overhead, power infrastructure losses, and other facility overheads.

How much does a data center rack cost?

Illustrative Annual Cost to Power One Data Center Rack (by Density, PUE, & Electricity Rate) This table shows how rack density, PUE, and location dramatically impact annual costs. An AI-capable 60 kW rack in a high-cost state could exceed \$200,000 annually, underscoring the financial implications of high-density infrastructure.
