The generated schematic is then given to gpt-4-vision-preview along with the optimized requirements to generate a json containing the content of the structure, for example:

This project digs into the development of an Arduino-based solar tracker system that detects sunlight using Light Dependent Resistors (LDR) and changes the position of the solar panel ...

1 question, what is the max size a schematic can be. Or is it just infinite? The limit of the schematic format is 65536x65536x65536 I believe. In Minecraft that basically means ...

As shown in the figure, a relatively easy mechanism can be witnessed here. The solar tracker is basically mounted over a couple of stand with a central movable axis. The pivotal ...

Here is a solar tracker system that tracks the sun's movement across the sky and tries to maintain the solar panel perpendicular to the sun's rays, ensuring that the maximum amount of ...

The circuit diagram depicts a sun solar tracking system using a PIC16F877A microcontroller. This system is designed to track the sun's movement and adjust the orientation of the solar panels to ...
