Developed in close partnership with Reykjavik Energy (Orkuveita Reykjavíkur) and the Icelandic GeoSurvey (SOR), the program gives you direct access to field sites, data, and experts, alongside ...

At the Iceland School of Energy, we are located within the Department of Engineering but our collaborative efforts span across Reykjavik University. Our team includes professionals from various ...

Explore interdisciplinary research in sustainable energy at the Iceland School of Energy, Reykjavik University. Discover student theses, faculty projects, and cutting-edge research areas such as ...

Discover the Iceland School of Energy at Reykjavik University, a leader in sustainable energy education. Explore graduate programs designed to address global energy challenges through engineering, ...

Apply to the Iceland School of Energy at Reykjavik University. Explore admissions requirements, application deadlines, and pathways to join our multidisciplinary graduate programs in sustainable ...

Explain the structural characteristics of Iceland's energy system and analyze their implications for the design and operation of energy communities with distributed energy resources.

Students spend their first year at Reykjavik University, focusing on coursework in electric power systems, including renewable energy integration, smart grids, and energy storage.

Whether you're ready to join our master's programs for two years, immerse yourself in our Energy Field School for two weeks, or explore Iceland as part of a group student trip, your journey starts here.

The Energy Field School welcomes applicants from a variety of academic, professional, and creative backgrounds who share an interest in renewable energy and sustainability.

School energy storage reykjavik

The Iceland School of Energy (ISE; Icelandic: Íslenski Orkuháskólinn) is an international graduate school within the Department of Engineering at Reykjavik University, the largest private university in Iceland. ISE is jointly owned by Reykjavik Energy, Reykjavik University, and Iceland GeoSurvey, and specialises in the fields of Sustainable Energy and Electric Power.
