What is a 3 phase distribution board?

TPN boards refer to Three Phase and Neutral distribution boards, which distribute power across three live wires and one neutral wire. Can I install a three phase distribution board in my home? While possible, three phase distribution boards are typically used in commercial and industrial installations where higher power demands exist.

Why do you need a three-phase distribution board?

A well-configured three-phase distribution board not only optimizes power distribution but also enhances safety by incorporating protective devices like MCBs (Miniature Circuit Breakers), RCDs (Residual Current Devices), and SPDs (Surge Protection Devices), all of which safeguard your electrical system from faults.

4. Energy Efficiency

What is a three phase consumer unit?

In addition to TPN boards, you'll often hear the term three phase consumer units, especially in smaller commercial setups. Consumer units are designed to handle smaller loads but serve the same function: distributing power safely and efficiently across multiple circuits.

What is the difference between a three phase consumer unit and distribution board?

A three phase consumer unit is used in smaller installations like commercial offices, while a three phase distribution board is for larger setups. Your email address will not be published. Required fields are marked *
