The pace of growth has been notable: since 2022, the country has added, on average, roughly one gigawatt of solar capacity every month. Last year, solar overtook wind power to become ...

Solar energy has great potential in Brazil, with the country having one of the highest levels of insolation in the world at 4.25 to 6.5 sun hours/day. [4] As of 2019, Brazil generated nearly 45% of its energy, or ...

Solar energy in Brazil surpassed the 55 GW milestone in March 2025, more than doubling its photovoltaic (PV) count in the last few years. That breakneck expansion is reshaping Brazil's energy ...

Discover all statistics and data on Solar photovoltaics in Brazil now on statista !

These records highlight the growing importance of solar energy in Brazil's energy landscape and its potential to soon become a major force in the country's energy transition.

In Brazil, solar photovoltaic dominates the distributed generation sector, representing 99% of the country's total distributed generation capacity. Small hydroelectric and wind account for ...

Brazil has reached a remarkable milestone in renewable energy, surpassing 55 GW of installed solar power capacity. According to the Brazilian Association of Photovoltaic Solar Energy ...

Brazil has made significant strides in solar power generation, emerging as the country's second-largest source of electricity with an operational capacity exceeding 55 gigawatts (GW).

Solar power generation has surpassed 55 gigawatts (GW) of operational installed capacity in Brazil. Of this total, 1.6 GW was added to the system this year, a report by the country's ...

Combining data from Absolar and official projections from the Brazilian Energy Research Corporation (EPE), cumulative installed solar PV capacity in Brazil by 2029 is expected to reach...
