Transparent Photovoltaic Smart Glass converts ultraviolet and infrared into clean electricity while transmitting visible light into building interiors, enabling a more sustainable use of natural daylight.

Solar control glass is ideal for helping to maximize natural daylight while reflecting a high proportion of solar radiation away from the glass, contributing to keeping the indoor space bright but cool.

The company develops glass solar panels that combine clean energy generation with light transmission, offering a modern solution for green buildings and energy-efficient design.

Transform traditional sunrooms into power-generating spaces with transparent photovoltaic glass. Maintains 60% light transparency while generating clean energy for premium residential applications.

Solar control smart glass controls solar glare and reduces the thermal transmittance through a glass facade, directly cutting down on associated HVAC costs.

Our Guardian SunGuard (TM) glass products offer different levels of solar control and light transmission, and various aesthetic options. View our glass solutions with the highest visible light transmission ...

Solar control glass is a type of glass designed to control the amount of solar heat and light that enters a building through its windows, doors, or skylights. As a result, it can improve energy ...

Imagine if every window in your home could generate electricity? That's exactly what photovoltaic glass panels transmit light while secretly working as solar power generators. These transparent marvels ...

In hot conditions or for building with high internal loads, solar control glass is used to minimise solar heat gain. It allows sunlight to pass through a window or facade while radiating and reflecting away a large ...

Solar sun room light-transmitting glass

The type of glass you choose for your sunroom plays a crucial role in its comfort, energy efficiency, and durability. The right glass can help regulate temperature, reduce glare, and enhance ...
