What is rooftop solar power?

Rooftop solar power, also known as rooftop photovoltaic (PV) systems, refers to solar panels installed on residential or commercial building rooftops to generate electricity. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power for your home or business.

What is a solar roof?

A solar roof, also known as a "photovoltaic roof" or "solar panel roof," is a type of roofing system that is designed to generate electricity from the sun's energy. It typically consists of solar tiles or solar shingles that are integrated into the roofing material.

What is the best roof for solar?

The ideal roof for solar has these characteristics: Flat roofs offer flexibility to orient panels optimally using tilted mounting systems, though this reduces the number of panels that can be installed due to spacing requirements to prevent shading. Even partial shading can significantly impact solar production.

Is rooftop solar a viable energy solution in 2025?
