Conflict in Sudan has affected fuel supply to thermal power plants, increasing the dependency on hydro-generation to meet the grid load. Since the conflict outbreak in April 2023, all thermal power stations ...

The southern region overwhelmingly voted for secession, and in July 2011, South Sudan became an independent nation, separate from Sudan. The secession of South Sudan significantly ...

The main topic of this study provides a comprehensive analysis of the relationship between FD, REC, EG, and ED in Sudan, a context that has been underexplored in existing literature.

This paper reviews the current status and future potential of renewable energy in Sudan. While hydropower generates approximately 54.6% of Sudan's electricity, other renewable sources ...

Using a method of proof by contradiction, the article argues that stable electricity supply is currently unattainable under present conditions in Sudan.

The electricity sector in Sudan is currently undergoing significant efforts aimed at modernizing and stabilizing its infrastructure. These initiatives are crucial for ensuring reliable power supply across the ...

In light of this shortfall, scheduled cuts and load shedding have become an official policy, but in reality, they paralyze production, hinder investment, and worsen the suffering of citizens.

Explore the impact of Sudan War on the energy sector, highlighting structural issues and supply shortages across regions.

Sudan is facing a wave of load shedding due to the lack of maintenance of its power plants, induced by the mobility restrictions currently in force. While urging citizens to be patient, the ...

As Sudan moves towards a more sustainable energy future, the implications for the construction sector are

Sudan load shifting

profound. The shift towards renewables will require innovative construction ...
