Various locations - BYD has signed a framework agreement with the China Electricity Council to jointly develop research projects, industry standards, and service networks for battery storage systems.

As China accelerates the deployment of renewable energy, the stability of the power system faces persistent operational constraints. Energy storage, serving as a pivotal enabling ...

China's participation in international energy storage standards establishment. Undertake the establishment of IEEE P2030.3TM- Standard for Test Procedures for Electric Energy Storage ...

This document specifies the technical requirements for the environmental conditions for operating and storage, power control, operational adaptability, energy conversion efficiency, fault ride-through, ...

SINEXCEL has co-developed China's first technical standards for grid-forming energy storage systems to mark a milestone in clean energy.

Through the incomplete statistic, in 2025, China released over 40 national, industry and local standards on energy storage.

Standards for storage technology and products can support the commercial development of the storage industry. For that purpose, policies on standard system and product certification were introduced.

These include a number of new GB standards that set certification requirements for various battery and energy storage systems. CCC certification is required for many battery systems ...

The Energy Storage Technology Standard (ESTS) is a foundational code that delineates the technical criteria for energy storage systems. This code addresses various technologies, ...

Technical standards for energy storage systems in China

China Electric Power Research Institute has taken the lead in compiling dozens of national standards, industry standards, enterprise standards, and group standards in the field of ...
