For many new to photovoltaic system design, determining the maximum number of modules per series string can seem straight forward, right? Simply divide the inverter's maximum system voltage rating ...

This analysis compares the ILR considerations for traditional string inverters against Module-Level Power Electronics (MLPE), including microinverters and power optimizers.

How to Calculate Minimum String Size
 How to Calculate Maximum String Size
 Multiple Allowable String Sizes
 The maximum string size is the maximum number of PV modules that can be connected in series and maintain a maximum PV voltage below the maximum allowed input voltage of the inverter. This is considered a safety concern and is addressed by NEC 690.7(A) Photovoltaic Source and Output Circuits. The 2017 NEC allows the following three methods for this c...
