The Energy Department is developing new technologies that will store renewable energy for use when the wind isn't blowing and the sun isn't shining.

A strong U.S. solar and storage manufacturing base can reduce supply chain uncertainty, drive clean energy deployment, and strengthen America's energy security.

The loan guarantee will finance the deployment of up to 1,000 solar photovoltaic (PV) systems and battery energy storage systems (BESS) located primarily at commercial and industrial ...

Storage Mythbusting Battery energy storage systems (BESS) store energy and distribute the energy to the electric grid, homes, or businesses. When paired with solar, the duo provides the ...

In the United States, there are two leading types of solar panels: cadmium telluride (CdTe) and crystalline silicon (c-Si). Across the two types, some of the manufacturing steps described below are ...

The Division advances research to identify safe, low-cost, and earth-abundant elements for cost-effective long-duration energy storage. OE's development of innovative tools improves storage ...

The underlying motivation for DOE's strategic investment in energy storage is to ensure that the American people will have access to energy storage innovations that enable resilient, flexible, ...

In December 2020, DOE released the ESGC Roadmap, the Department's first comprehensive energy storage strategy to develop and domestically manufacture energy storage technologies that can ...

There are two main types of solar energy technologies--photovoltaics (PV) and concentrating solar-thermal power (CSP). On this page you'll find resources to learn what solar ...

US Department of Commerce for Solar Energy Storage

U.S. Department of Commerce Renewable Energy and Energy Efficiency Advisory Committee Recommendation Fact Sheet Recommendation 1 (Approved July 29, 2021) on Acceleration of "1 ...
