Wind And Solar generates 15.3% of global electricity worldwide. Compare Wind And Solar power generation by country with 2024 data and environmental impact.

A new report from the non-profit research group, Climate Central, analyzing historical data on wind and solar energy in the US from 2014-2023 finds the amount of electricity produced from ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Renewable energy statistics 2025 provides datasets on power-generation capacity for 2015-2024, actual power generation for 2015-2023 and renewable energy balances for over 150 countries and areas for ...

Global electricity generation by renewable energy technology main case, 2023 and 2030 - Chart and data by the International Energy Agency.

This dataset contains yearly electricity generation, capacity, emissions, imports and demand data for European countries. You can find more about Ember's methodology in this document.

Renewable sources--wind, solar, hydro, biomass, and geothermal--accounted for 22% of generation, or 874 billion kWh, last year. Annual renewable power generation surpassed nuclear ...

Approximately 2% of solar energy striking Earth's surface is converted into kinetic energy in wind. 1 Wind turbines convert this kinetic energy to electricity without emissions, 1 and can be built onshore ...

Climate Central's WeatherPower™ tool produces daily estimates and forecasts of local solar and wind generation across the continental U.S. Daily forecasts from WeatherPower reflect the influence of ...

# Wind power and photovoltaic power generation rate

This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.
